LOCAL GOVERNMENTS AND LOCAL & REGIONAL FOOD ECONOMIES

· ELGL (Emerging Local Government Leaders) Webinar Series ·
An Overview of Local Food Economies in the US: Trends & Issues
Emily Edmonds | CEFS – NCGT | October 11, 2016
www.elgl.org | www.ncgrowingtogether.org | www.localfoodeconomies.org
North Carolina Growing Together is a five-year USDA-funded project aiming to strengthen and expand local and regional food supply chains and to model this work for other geographies in the U.S.

Farmer capacity
• Food safety, market channels, production techniques, buyer connections

Supply chain expansion
• Wholesale and institutional partner connections, infrastructure assessment and business feasibility

Producer & processor capacity
• Resource development for meat, dairy, seafood, produce, and value-added products

Supportive business environments
• Local government integration; small business development and support for food-based entrepreneurs

Born and raised in Western North Carolina, I received an MPA from UNC-Chapel Hill’s School of Government and worked on a number of economic development & food systems projects across the East Coast.

I grew up on farms, owned a farm-to-table restaurant, ran a regional food policy council, and generally adore food in all its forms. Especially cheeses.

I currently live in the Triangle with my family, where I enjoy reading, traveling, and, of course, pulling for the Tarheels and the Green Bay Packers (that’s right, Kent Wyatt!).

This material is based upon work that is supported by the National Institute of Food and Agriculture, United States Department of Agriculture, under award no. 2013-68004-20363. Any opinions, findings, recommendations, or conclusions expressed in this publication are those of the author(s) and do not necessarily reflect the view of the U.S. Department of Agriculture.
Local food systems need the unique skills, capacities, and abilities of regional planners, developers, and leaders:

- Regional and local coordination of projects and goal-setting
- Assistance with spatial and data-based analysis
- A deep knowledge of the communities served
- Awareness of the connections between and across communities
- Partnerships at multiple decision-making levels
- Knowledge of community input & feasibility processes
- Access to technologies and innovations
- Interaction with state and federal agencies
- Access to funding
- Evaluation & impact analysis

Local food systems offer solutions to many significant social, cultural, and built environment issues.

Local food economies can also encourage place-based benefits that are specific to a community's natural, built, and human resources.
COMMON FOOD SYSTEM TERMS AND DEFINITIONS

- **Agricultural Economic Development**
  - Encompasses financial and regulatory structures that encourage farm success
  - Includes policies that impact food processors and other supply chain businesses, including transportation

- **Aggregation**
  - Popular “food hub” and other ag center function, pulling together smaller volumes of agricultural products into larger orders for wholesale markets
  - Some food hubs serve additional purposes

- **Food Access & Consumption**
  - Covers emergency and non-emergency food access for people at all income levels
  - Includes front-line food services like pantries and kitchens
  - Also includes topics like access to healthy foods, food desert prevalence, distance to food sources, and other factors

- **GAP & FSMA**
  - GAP: Good Agricultural Practices, voluntary USDA certification program (req. by some buyers)
  - GHP: Good Handling Practices (similar, but for food processing facilities)
  - FSMA: update to ancient food safety regulations; not connected to GAP

- **The Great Variety of Kitchens**
  - Shared-use kitchens, commercial kitchens, co-op kitchens…

Any other terms you’d like to know more about? Lingo you hear all the time?

Let us know in the chat box and I’ll do my best to explain as I go!
Local food economies encompass everything that is associated with a local food system. This includes the entire food supply chain – from production to consumption – as well as affiliated businesses and structures.
LOCAL FOOD SUPPLY CHAIN

Producer Inputs
seeds, equipment, stock, land, water

Production
land, water, the business of farming, technique, methods, labor, certifications

Storage & Processing
harvest, cooling & storage, packing, processing, food manufacturing, aggregation

Distribution & Sales
wholesale/retail, institutional buyers, chefs, trucking, warehousing, sales teams

Consumption & Access
grocery & retail outlets, foodservice, food banks/pantries, farmers markets
NATIONAL AG STATISTICS

- Of American consumers prefer food grown in the U.S. from regional sources
- 13 million acres of farmland needed to produce the minimum daily requirement of fruits and veggies in the US for US consumers by 2020
- US Farmers’ markets have increased 350% since 1994
- APA has included food systems in its planning policy guide since 2007; USDA has maintained farm-to-fork initiatives since 2000

N.C. AG STATISTICS

- Agriculture & agribusiness account for 1/6 of NC’s income and employees.
- Total income in Agriculture and Food industries in NC is $84.5 billion (a 14.6% share of NC income).
- NC ranks 8th in the nation for agricultural production. More than 17% of gross state product is contributed by food, forest and fiber industries.
- Of all NC farms, almost 75% are family-owned small to medium-sized businesses reporting less than $100,000 in farm revenue per year.

So, what’s local?

Food systems are unique to the geographic, cultural, and market attributes of their regions. Local and regional governments are encouraged to create their own definitions of “local” foods for use in branding and marketing efforts.

*Data sources are provided on the final slide.*
$84 billion in Agriculture, Food, and Forestry Industries (Sept. 2016)

Data provided by Mike Walden, Reynolds Distinguished Professor and Extension Economist, N.C. State University, College of Agriculture and Life Sciences

INTERSECTIONS BETWEEN GOVERNANCE & LOCAL FOOD ECONOMIES

Asset-Based Approaches to Local Food System Development

• Rural/urban community dialogue, partnerships, markets and values
  • Opportunities for rural youth (the “brain drain” problem)

• Land preservation and land use strategies

• Emergency/crisis planning

• Regional economic development strategies
  • Economic impact of agriculture & food entrepreneurship
  • Revitalization of downtowns, vacant land, and urban centers
  • Agritourism
  • Systems approach: private sector opportunities across multiple industries

Succession
Who farms next?
• Average age of NC farmer: 59
• Average age of US farmer: 55

Land Loss
Prioritizing farm-conscious growth
• 2016: 40 acres per hour
• Prime soils & water access

Economics
Regional impacts
• Placemaking and authentic asset-based development
• Innovative, location-based strategies
• Resiliency of small- and mid-scale business networks
• Rural-urban market relationships
COLLABORATIVE OPPORTUNITIES IN LOCAL FOOD ECONOMIES

Leveraging Collaboration for Successful Projects

The development of local food economies relies on nontraditional partners and a regional approach to infrastructure, transportation and land use.

PARTNERS

- Traditional partners (other local government staff, councils of government)
- Ag partners (Extension Service, NCDA)
- Nontraditional partners (public health, transportation & infrastructure, small business centers & workforce development, SWCDs)
- Community partners (food councils, nonprofits, faith-based groups)
- Higher education partners (universities and community colleges)
- Nonprofits & NGOs
- Social networks
### STRATEGIES FOR FOOD SYSTEM DEVELOPMENT

<table>
<thead>
<tr>
<th>Category</th>
<th>Strategies</th>
</tr>
</thead>
</table>
| **Land-Use & Zoning**           | • Training and support for policy and planning efforts that recognize agriculture  
                                 | • Zoning, setbacks, infrastructure allowances, signage, bona fide farm exemption, land preservation incentives  
                                 | • Community gardens, urban agriculture, and farmers’ markets |
| **Asset-Based Development Strategies** | • Regional approach to agricultural economic development  
                                    | • Market and supply analysis to determine transport and distribution routes, production centers, consumption channels, etc.  
                                    | • Regional goals for farmland protection plans & programs |
| **Strategic & Long-Range Planning** | • Whole-systems approach to food & supply chains  
                                      | • Infrastructure planning for supply chain expansion (particularly transportation, market development, regional branding, and storage) |
| **Regional Economic Planning**  | • Local food economies as a recruitment tool  
                                 | • Local food economies as a creation, retention, and expansion tool  
                                 | • Partnerships with educational institutions: business & entrepreneurship development |
FOOD SYSTEMS PLANNING PROCESS

ASSESSMENT
- Data, GIS
- Food System Assessments
- Farmland inventory
- EQUITY

REGULATIONS
- Zoning updates
- Farmland preservation plan
- Bona fide farms

ECONOMICS
- Local gov purchasing
- Market analysis & support
- Agricultural economic development
- Business & entrepreneurship development

COMMUNITY
- Food policy councils
- Community partners
- Bridging social capital

MAKE IT LAST
- Comprehensive plans are just the start
- Adopted policies and programs
- Committed funds
NORTH CAROLINA’S NEXT STEPS

Key Initial Actions

- Identify key food and agriculture issues that are of high priority for the region
- Collect baseline data that informs these prioritized issues
- Utilize data to identify strategies to address priority issues
- Act as a Community of Practice (CoP) to share knowledge with one another and to identify national, state, and local resources that can be leveraged to benefit regions & state

- Encourage partnerships between regional councils and local governments.
- Create pilot programs and communities of practice for governments involved in this work – to see what works and what doesn’t, and to examine and create data collection systems.
- Maximize supply chain development by gathering accurate information.
- Encourage training for staff, managers, and elected officials for topics such as links between food access and health; zoning and development issues for agriculture; entrepreneurship development for food businesses; and other topics. Implement trainings in partnership with state universities and other agencies.
- Promote the NC 10% Local Food Marketing Campaign and support governments in reviewing procurement policies.
- Convene meetings of extension agents with city/county managers, planners, tourism managers, and economic developers to discuss issues and explore initial topics for prioritization.
- Support governments starting or joining a food policy council. Regional COGs can provide structural support for councils that work directly with local groups in each county or metro area.
- Help governments learn from other successful projects to add Agricultural Economic Development Plans to their comprehensive economic development strategies. Examine ways that existing staff or proposed new hires could serve as agribusiness managers or agricultural economic developers in future years.
Food system placemaking is on the leading edge of innovative, multi-disciplinary governance strategies.

The next decade will see national leaders emerge, addressing agricultural & food-based economic development through regional planning and coordinated statewide efforts.
QUESTIONS?

Data sources used in this presentation include:

• NC Agriculture & Agribusiness Statistics, NCSU, 2016:
